

Akamal Shaikh

+91-9834640063 | akamalferojshaikh1@gmail.com | LinkedIn | GitHub | LeetCode | Immediate Joiner

Aspiring Software Engineer with hands-on experience in Generative AI (RAG, Agentic RAG, GraphRAG) and full-stack development using the MERN stack. Passionate about building intelligent, production-ready AI pipelines combining knowledge graphs and vector databases. Solid fundamentals in deep learning and neural networks, with projects spanning C++ and Node.js.

Education

ISBM College of Engineering, Pune (SPPU Affiliated)	2028
Bachelor of Engineering in Computer Engineering 3rd Year, V Semester	CGPA: 8.00
Jamia Polytechnic Akkalkuwa	2025
Diploma in Computer Engineering	Percentage: 86.17

Technical Skills

- **Languages:** Python, C++, JavaScript, SQL
- **Frontend:** React.js, Tailwind CSS, HTML, CSS
- **Backend:** Node.js, Express.js, REST APIs
- **Databases:** MongoDB, MySQL, Neo4j, Pinecone
- **AI/ML:** LangChain, LangGraph, Ollama, RAG, Agentic RAG, GraphRAG, Gemini API
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, IntelliJ IDEA

Projects

GraphRAG Movie Intelligence System Node.js, Neo4j, Pinecone, Gemini AI	2025
• Built a production-ready Graph + Vector RAG pipeline combining a Neo4j knowledge graph (850 nodes, 1,200 relationships) with a Pinecone vector database (106 semantic vectors) orchestrated by Gemini AI. • Implemented a dual-retrieval strategy: structured Cypher graph traversal for relationship queries (e.g., director-actor links) and cosine-similarity vector search for semantic queries (e.g., “movies like Inception”). • Engineered entity resolution and intent classification to dynamically route queries between graph and vector search, achieving higher accuracy over traditional RAG on multi-hop relationship questions.	
Placement Predictor – Deep Learning Model C++	2025
• Implemented a logistic regression (binary classification) neural network from scratch in C++ without any ML framework, including forward pass, sigmoid activation, and binary cross-entropy loss. • Trained the model on a self-generated dataset of 2,000+ synthetic student records using features: DSA problems solved, projects completed, IQ score, and attendance percentage. • Applied Min-Max normalization for stable gradient descent; achieved high training accuracy with iterative weight updates over configurable epochs.
