

AKAMAL SHAIKH

+91-9834640063 | akamalferojshaikh1@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Software Engineering student with hands-on experience building Generative AI and full-stack applications using RAG, Agentic RAG, GraphRAG, and the MERN stack. Experienced in building production-ready AI pipelines combining knowledge graphs, vector databases, and LLMs, with projects spanning Node.js, React, and C++.

Education

ISBM College of Engineering, Pune (SPPU Affiliated)	2028
Bachelor of Engineering in Computer Engineering	3rd Year, V Semester CGPA: 8.00
Jamia Polytechnic Akkalkuwa	2025
Diploma in Computer Engineering	Percentage: 86.17

Projects

RepoBrain - AI Codebase Intelligence Platform - React, Node.js, Neo4j, MongoDB, Gemini [Live Preview](#)

- Built a codebase intelligence platform that clones and parses GitHub repositories into a Neo4j code graph and vector search index for AI-powered repository understanding.
- Implemented codebase Q&A with file/line citations, blast-radius analysis, stack-trace tracing, dead-code detection, and automated onboarding documentation using Gemini AI.
- Engineered a React + Vite frontend and Node.js/Express API with Neo4j AuraDB, MongoDB Atlas, vector search, shared TypeScript packages, and production build support.

GraphRAG Movie Intelligence System - Node.js, Neo4j, Pinecone, Gemini [Github Repo](#)

- Built a production-ready Graph + Vector RAG pipeline combining a Neo4j knowledge graph (850 nodes, 1,200 relationships) with Pinecone (106 semantic vectors), orchestrated by Gemini AI.
- Implemented dual retrieval using Cypher graph traversal for relationship queries and cosine-similarity vector search for semantic queries.
- Engineered entity resolution and intent classification to dynamically route queries between graph and vector search, achieving higher accuracy over traditional RAG on multi-hop relationship questions.

Placement Prediction Neural Network - C++, Neural Networks, Machine Learning [Github Repo](#)

- Built a 5-16-10 feed-forward neural network from scratch in C++, implementing ReLU activation, Softmax classification, Xavier initialization, and cross-entropy loss.
- Implemented forward propagation, backpropagation, gradient computation, and gradient descent training on 2,000 student records for multiclass placement prediction.
- Developed a standalone inference pipeline that persists trained model weights and predicts the target company for new student profiles, achieving ~73% training accuracy.

Technical Skills:-

- **Languages:** Python, C++, JavaScript, SQL
- **Frontend:** React.js, Tailwind CSS, HTML, CSS
- **Backend:** Node.js, Express.js, REST APIs
- **Databases:** MongoDB, MySQL, Neo4j, Pinecone
- **AI/ML:** LangChain, LangGraph, Ollama, RAG, Agentic RAG, GraphRAG, Gemini API
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, IntelliJ IDEA
