

ROBOTICS PROJECT - PRICE REQUEST

Customer: Akamal Shaikh | **Date:** 06 October 2026

Project: Autonomous 4WD Robot - Obstacle Avoidance and Grid Navigation

Request: Please quote your lowest price for suitable budget components, with taxes included. Mention unavailable items and suggested alternatives.

A. Robot components and power supply

No.	Component / specification	Qty.	Rate (INR)	Amount (INR)
1	Arduino UNO R3 compatible board with soldered headers and matching USB data cable	1 set		
2	Complete 4WD chassis kit: 4 matching 6V BO geared motors (preferably 100-150 RPM), 4 wheels, brackets, screws, nuts and spacers. Do not quote these twice.	1 kit		
3	HC-SR04 ultrasonic distance sensor	1		
4	SG90 micro servo with horns and screws	1		
5	HC-SR04 holder compatible with SG90, plus servo-to-chassis mounting arrangement	1 set		
6	Motor driver: quote L298N only if suitable for the selected motors; otherwise quote a compatible driver. Confirm model and required quantity.	As needed		
7	Factory-assembled protected 7.4V (2S) Li-ion battery pack, approximately 2000-3000mAh; discharge rating suitable for four motors	1		
8	Matching 8.4V Li-ion charger for the above 2S pack; compatible connector and polarity	1		
9	5V regulated buck converter, minimum 3A continuous output; please set and verify output	1		
10	Motor power regulator, only if needed for chosen battery/driver/motors; suitable continuous and starting-current rating	If needed		
11	DC-rated main ON/OFF switch, inline fuse holder and suitable fuse	1 set		
12	Battery mating connector and small screw-terminal power distribution connectors	1 set		

Compatibility check: Please match the driver to motor stall current (two motors per channel if paired). The battery reaches 8.4V fully charged; confirm suitable motor voltage and power regulation.

WIRING, TOOLS & QUOTATION TOTAL

B. Wiring and assembly materials

No.	Component / specification	Qty.	Rate (INR)	Amount (INR)
1	Jumper wires: male-male, male-female and female-female	20 each		
2	Red and black stranded power wire, approximately 20-22 AWG; size to actual current	2m each		
3	Small breadboard OR small perfboard (quote economical option)	1		
4	100nF ceramic capacitors for motors; 470-1000uF electrolytic capacitors, 16V or higher	4 + 2		
5	Electrical insulation tape; double-sided foam tape	1 each		
6	Heat-shrink pieces, cable ties, battery securing strap and extra mounting spacers/screws as required	1 set		

C. Basic tools - quote separately (customer has no tools)

No.	Component / specification	Qty.	Rate (INR)	Amount (INR)
1	Basic digital multimeter with red/black probes and battery	1		
2	Soldering kit: iron, safe stand, electronics solder and flux	1 set		
3	Small Phillips/flat screwdriver set	1 set		
4	Small wire cutter/stripper and needle-nose pliers	1 each		

D. Optional upgrade - exclude from basic total

Quote the additional cost for compatible encoder motors/encoder sensors and cables, at least one encoder on each side. If replacing kit motors, quote the price difference.

Quotation summary (INR)

A. Robot parts: _____ B. Wiring/materials: _____

C. Tools: _____ Delivery, if any: _____

Total for A + B + C, including taxes: _____

Optional encoder upgrade: _____ Availability: _____

Shop/contact: _____

Buy elsewhere taxes: _____
